

# Presidency University, Kolkata

## SYLLABUS

IN

**B.Sc. STATISTICS (Honours) 2018**

Under

**Choice Based Credit System**

**Semesters 1 – 6**

**(With effect from Academic Session 2018 – 2019)**

**Department of Statistics  
(Faculty of Natural and Mathematical Sciences)  
Presidency University  
Hindoo College (1817 – 1855), Presidency College (1855 – 2010)  
86/1, College Street, Kolkata – 700 073  
West Bengal, INDIA**

Department of Statistics  
Presidency University

CONTENT

	Topic	Page No.
A.	Semester-wise Course Structure and Module Compositions	3
B.	Credit Allocation and Marks Distribution	4 – 6
C.	Detailed Syllabus and Suggested Reading List for Respective Modules	
	<b>Core Courses</b>	
	<b>STAT01C01</b> : Descriptive Statistics	7
	<b>STAT01C02</b> : Probability and Probability Distributions I	8
	<b>STAT02C01</b> : Algebra	9
	<b>STAT02C02</b> : Probability and Probability Distributions II	10
	<b>STAT03C01</b> : Mathematical Analysis and Calculus	12
	<b>STAT03C02</b> : Sampling Distributions	13
	<b>STAT03C03</b> : Statistical Computing Using C/C++	14
	<b>STAT04C01</b> : Survey Sampling and Indian Official Statistics	16
	<b>STAT04C02</b> : Statistical Quality Control and Demography	18
	<b>STAT04C03</b> : Statistical Inference	19
	<b>STAT05C01</b> : Multivariate Analysis and Nonparametric methods	21
	<b>STAT05C02</b> : Linear Models	22
	<b>STAT06C01</b> : Design of Experiments	23
	<b>STAT06C02</b> : Time Series Analysis and Index Numbers	24
	<b>Skill Enhancement Electives (SEE)</b>	
	<b>STAT03SEE</b> : Data Analysis Using Excel and R	26
	<b>STAT03SEE</b> : Data Analysis Using Software Packages	27
	<b>STAT04SEE</b> : Advanced Statistical Computing using R	28
	<b>STAT04SEE</b> : Research Methodology	29
	<b>Discipline Specific Elective Papers (DSE)</b>	
	STAT DSE : Stochastic Processes and Queuing Theory (Theory + Practical)	30
	STAT DSE : Econometrics (Theory+ Practical)	31
	STAT DSE : Advanced Statistical Methods (Theory +Practical)	32
	STAT DSE : Survival Analysis and Biostatistics (Theory+ Practical)	33
	STAT DSE : Advanced Mathematical Methods (Theory +Tutorial)	35
	STAT DSE : Operations Research (Theory+ Practical)	36
	STAT DSE : Project Work (Sixth Semester)	37
	<b>Generic Elective Papers (GE)</b> <b>[to be selected from other Departments/Disciplines]</b>	
	<b>STAT01GE01</b> : Statistical Methods	38
	<b>STAT02GE01</b> : Introductory Probability	39
	<b>STAT03GE01</b> : Basics of Statistical Inference	40
	<b>STAT04GE01</b> :Applied Statistics	42

**Academic Sessions :**

Odd Semester : Semester One / Three / Five

Even Semester : Semester Two / Four / Six

**Skill Enhancement Electives (SEE) [Credit : 4 each, 2 papers to be selected from the list]**

1. Data Analysis Using Excel and R
2. Data Analysis Using Software Packages
3. Advanced Statistical Computing using R
4. Research Methodology

**Discipline Specific Elective Papers (DSE) [Credit : 6 each, 4 papers to be selected from the list]**

<b>Group-1</b>	<b>Group-2</b>
1. Stochastic Processes and Queuing Theory (Theory + Practical)	1. Survival Analysis and Biostatistics (Theory+ Practical)
2. Econometrics (Theory+ Practical)	2. Advanced Mathematical Analysis (Theory +Tutorial)
3. Advanced Statistical Methods (Theory +Practical)	3. Operations Research (Theory+ Practical)
	4. Project Work (Sixth Semester)

In each of the Fifth and Sixth Semesters, a student can choose one DSE Paper from Group-1 and one from Group-2. In the Sixth Semester, a student cannot opt for a Paper already chosen in the Fifth Semester.

**Generic Elective Papers (GE) [Credit: 6 each, 4 papers of any discipline to be selected from other Departments/Disciplines]**

1. Statistical Methods
2. Introductory Probability
3. Basics of Statistical Inference
4. Applied Statistics

Scheme for Choice Based Credit System in B.Sc. (Honours) Statistics

1.1 Credit Distribution across Courses

Course Type	Credits		
	Total Papers	Theory+Practical	Theory+Tutorial
Core Courses	14	$14 \times 4 + 14 \times 2 = 84$	$14 \times 5 + 14 \times 1 = 84$
Skill Enhancement Elective	2	$2 \times 4 = 08$	$2 \times 4 = 8$
Discipline Specific Electives	4	$4 \times 4 + 4 \times 2 = 24$	$4 \times 5 + 4 \times 1 = 24$
Ability Enhancement Compulsory Language Course	1	$1 \times 4 = 04$	$1 \times 4 = 4$
Ability Enhancement Compulsory Environmental Science Course	1	$1 \times 4 = 04$	$1 \times 4 = 4$
Generic Elective	4	$4 \times 4 + 4 \times 2 = 24$	$4 \times 5 + 4 \times 1 = 24$
<b>Total</b>	<b>26</b>	<b>148</b>	<b>148</b>

1.2 Scheme for CBCS Curriculum

Semester	Course Name	Paper Code	Course Detail	Credits	Marks
I	Ability Enhancement Compulsory Course-I	STAT01AEC01	English Communication / Environmental Science	4	100
	Core course-I	STAT01C01	Descriptive Statistics	4	70
	Core course-I Practical		Descriptive Statistics Lab	2	30
	Core course-II	STAT01C02	Probability and Probability Distributions-I	5	80
	Core course-II Tutorial		Tutorial	1	20
	Generic Elective-I	STAT01GE01	Any one from the List of <b>Generic Electives / Interdisciplinary Courses</b> from other Subjects	4/5	70/80
	Generic Elective-I Practical/ Tutorial		Practical/Tutorial	2/1	30/20

B.Sc. (Honours) Statistics

Semester	Course Name	Paper Code	Course Detail	Credits	Marks

Discipline Specific Elective– 4 Practical/ Tutorial	Practical/ Tutorial		2/1	30/20	
				Total	2600

N.B :-

1. The lecture hours calculation in all the papers include both theory and practical/ tutorial classes.
2. Use of suitable software such as MS-EXCEL / MINITAB / SPSS or similar others, depending on the availability of faculty and resources for all the core practical courses.

**Core Papers in Statistics**

Semester	<b>ONE</b>
Paper Number	<b>STAT01C01</b>
Paper Title	<b>Descriptive Statistics</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Introduction: Nature of Statistics, Uses of Statistics, Statistics in relation to other disciplines, Abuses of Statistics. Types of Data: Concepts of population and sample, quantitative and qualitative data, cross-sectional and time-series data, discrete and continuous data. Different types of scales: Nominal, ordinal, interval and ratio. Collection and Scrutiny of Data: Primary data – designing a questionnaire and a schedule, checking its consistency. Secondary data – its major sources. Complete enumeration. Presentation of data: Construction of Tables with one or more factors of classification, diagrammatic representations, frequency distributions and cumulative frequency distributions and their graphical representations, stem and leaf displays. <b>30L</b></p> <p><b>Unit 2</b> Measures of Central Tendency: Mean, Median, Mode. Measures of Dispersion: range, mean deviation, standard deviation, coefficient of variation, Gini's Coefficient, Lorenz Curve. Moments, Sheppard's corrections (without proof), skewness and kurtosis, Quantiles and measures based on them, Liapunov's inequality and other inequalities related to measures of skewness and kurtosis. Box Plot, Outlier Detection. Quantile-Quantile Plot. <b>40L</b></p> <p><b>Unit 3</b> Bivariate data: Definition, scatter diagram, simple correlation, linear regression, principle of least squares, Correlation Index, Correlation Ratio. Intra-class correlation coefficient. Spearman's Rank correlation and Kendall's Tau (including tie cases). <b>30L</b></p> <p><b>Unit 4</b> Analysis of Categorical Data: Contingency table, association of attributes and different measures, odds ratio, Pearson's measure, Goodman-Kruskal's Gamma <b>28L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Graphical representation of data.</li> <li>2. Problems based on measures of central tendency.</li> <li>3. Problems based on measures of dispersion.</li> <li>4. Problems based on combined mean and variance and coefficient of variation.</li> <li>5. Problems based on moments, skewness and kurtosis.</li> <li>6. Fitting of polynomials, exponential curves.</li> <li>7. Karl Pearson correlation coefficient.</li> <li>8. Correlation coefficient for a bivariate frequency distribution.</li> <li>9. Lines of regression, angle between lines and estimated values of variables.</li> <li>10. Correlation ratio and correlation index.</li> <li>11. Rank correlation with and without ties.</li> </ol>

	12. Computation of intra class correlation coefficient
	13. Problems on measures of association.
Reading/Reference Lists	<ol style="list-style-type: none"> <li>1. Freedman, Pisani, Purves: Statistics</li> <li>2. Goon A.M., Gupta M.K. and Dasgupta B. Semester	<b>ONE</b>
Paper Number	<b>STAT01C02</b>
Paper Title	<b>Probability and Probability Distributions I</b>
No. of Credits	<b>6</b>
No. of Classes	Theory: 5 Tutorial: 1
	<p><b>Unit 1</b> Probability: Introduction, random experiments, sample space, events and algebra of events. Definitions of Probability – classical, statistical. Limitations of Classical definition. Probability of union and intersection of events, Probability of occurrence of exactly m and at least m events out of n events, Examples based on classical approach and repeated trials, Kolmogorov’s Axiomatic definition. <b>30L</b></p> <p><b>Unit 2</b> Conditional Probability, laws of addition and multiplication, theorem of total probability, Bayes’ theorem and its applications, independent events. <b>15L</b></p> <p><b>Unit 3</b> Random variables, distribution function and properties, p.m.f., p.d.f., illustrations and properties of random variables. Mathematical Expectation and properties. Probability generating function. Moments, Dispersion, Skewness, Kurtosis and Quantiles. Cauchy-Swartz Inequality, inequalities related to moments and measures of skewness and kurtosis. Moment generating function, Cumulant generating function and Characteristic function. Uniqueness and inversion theorems (without proof) along with applications. Gambler’s ruin problem. <b>40L</b></p> <p><b>Unit 4</b> Two dimensional random variables: discrete type, joint, marginal and conditional p.m.f and c.d.f., statement of properties of c.d.f, independence of variables, Sum-law and Product-law of expectation, trinomial distribution. <b>11L</b></p>
List of Practical	Tutorial Only

--	--

Semester	<b>TWO</b>
Paper Number	<b>STAT02C01</b>
Paper Title	<b>Algebra</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Real vectors (generalization of co-ordinates), Angle and Norm of vectors, Orthogonality and Gram-Schmidt Orthogonalization Process. Axiomatic Approach and examples. Subspaces, intersection and sum of subspaces. Span of a set, Linear dependence and independence, dimension and basis, dimension theorem. Direct Sum and Complement subspace, Orthogonal Projection of a vector. <b>30L</b></p> <p><b>Unit 2</b> Algebra of matrices, theorems related to triangular, symmetric and skew symmetric matrices, idempotent matrices, orthogonal matrices, singular and non-singular matrices and their properties. Trace of a matrix, Determinant, Adjoint and inverse of a matrix and related properties. Product of determinants, inverse of a matrix. Rank of a matrix, row-rank, column-rank, standard theorems on ranks, rank of the sum and the product of two matrices. Rank factorization and Sylvester's Inequality. Partitioning of matrices and determinant and inverse of partitioned matrices. Elementary transformations, Echelon form and Normal form. <b>35L</b></p> <p><b>Unit 3</b> System of homogeneous and non-homogeneous linear equations, Projection Matrix and application to least square method. Generalized inverse, Moore-Penrose inverse. Quadratic forms: Classification &amp; canonical reduction. Linear transformations. <b>30L</b></p>

	<p><b>Unit 4</b> Characteristic roots and Characteristic vector, Properties of characteristic roots (symmetric and general matrices). Diagonalization of matrices, Spectral Decomposition, and Singular value decomposition. Power method, Cayley Hamilton theorem, Extrema of Quadratic forms. General concepts of Inner Product and Norm (Brief discussion), Applications of Linear Algebra in Statistics. <b>33L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Linear independence and dependence.</li> <li>2. Orthogonality and Gram-Schmidt Orthogonalization Process.</li> <li>3. Basis and Dimension.</li> <li>4. Basis of sum, intersection and complement of subspaces.</li> <li>5. Projection of vectors on a subspace.</li> <li>6. Determinant of a matrix</li> <li>7. Inverse of matrix.</li> <li>8. Rank and Rank factorization of matrices.</li> <li>9. Elementary transformations</li> <li>10. Solutions of system of linear equations.</li> <li>11. Finding g-inverse of a matrix</li> <li>12. Problems on quadratic forms.</li> <li>13. Problems related to characteristic roots and vectors.</li> <li>14. Power method of finding characteristic roots.</li> <li>15. Problems related to linear transformations.</li> </ol>
Reading Reference List	<ol style="list-style-type: none"> <li>1. Hadley G. : Linear Algebra</li> <li>2. Rao A.R. &amp; Bhimasankaram P. : Linear Algebra</li> <li>3. Searle S.R. : Matrix Algebra – useful for Statistics</li> <li>4. Rao C.R. : Linear Statistical Inference &amp; its Applications</li> <li>5. Hoffman K. &amp; Kunze R. : Linear Algebra</li> <li>6. Goon A.M. : Vectors and Matrices.</li> </ol>

Semester	<b>TWO</b>
Paper Number	<b>STAT02C02</b>
Paper Title	<b>Probability and Probability Distributions II</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Standard discrete probability distributions: Binomial, Poisson, geometric, negative binomial, hypergeometric, uniform. Standard continuous probability distributions: uniform, normal, exponential, Cauchy, beta, gamma, lognormal, logistic, double exponential and Pareto along with their properties and limiting/approximation cases. Truncated distributions. <b>40L</b></p> <p><b>Unit 2</b> Probability Inequalities (Univariate Cases) : Markov's &amp; Chebyshev's (one- and two-sided) inequalities, Jensen's Inequality, Holder's Inequality, Minkowski's Inequality,</p>

	<p>Cr Inequality etc. Scaling methods : Z, Percentile, Thurstone, Equivalent scaling procedures. <b>23L</b></p> <p><b>Unit 3</b> Review of Bivariate c.d.f and p.d.f. and generating functions in continuous case. Marginal and Conditional distributions, Independence, Conditional Expectation, Correlation and Regression. Theorems on sum and product of expectations of random variables . Bivariate Normal Distribution (BVN): p.d.f., properties, marginal and conditional distribution. <b>35L</b></p> <p><b>Unit 4</b> Limit laws: Sequence of random variables, convergence in probability, almost sure convergence, convergence in mean square and convergence in distribution and their interrelations, W.L.L.N., S.L.L.N and their applications, De-Moivre Laplace Limit theorem, Statement of Central Limit Theorem (C.L.T.) for i.i.d. variates, applications of C.L.T. <b>30L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Fitting of binomial distribution for given n and p.</li> <li>2. Fitting of binomial distribution after computing mean and variance</li> <li>3. Fitting of Poisson distribution for given value of lambda</li> <li>4. Fitting of Poisson distribution after computing mean.</li> <li>5. Fitting of negative binomial.</li> <li>6. Fitting of suitable distribution.</li> <li>7. Application problem based on binomial distribution</li> <li>8. Application problem based on Poisson distribution.</li> <li>9. Application problem based on negative binomial distribution.</li> <li>10. Problems based on are property of normal distribution.</li> <li>11. To find the ordinate for a given area for normal distribution.</li> <li>12. Application based problems using normal distribution.</li> <li>13. Fitting of normal distribution when parameters are given .</li> <li>14. Fitting of normal distribution when parameters are not given.</li> <li>15. Fitting of some other continuous distributions.</li> <li>16. Scaling of scores.</li> <li>17. Fitting of truncated distributions.</li> </ol>

	16. Miller, Irwin and Miller, Marylees (2006): John E. Freund's Mathematical Statistics with Applications, (7th Edn.), Pearson Education, Asia.
	17. Myer, P.L. (1970): Introductory Probability and Statistical Applications, Oxford & IBH Publishing, New Delhi.

Semester	<b>THREE</b>
Paper Number	<b>STAT03C01</b>
Paper Title	<b>Mathematical Analysis and Calculus</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 5 Tutorial: 1
Syllabus	<p><b>Unit 1</b> Representation of real numbers as points on a line, Algebraic, Field Structure, Order Structure and Completeness properties of <math>\mathbf{R}</math> (Concepts only) , Archemidian Property , Bounded and unbounded sets, neighbourhood of a point, Supremum and infimum, Topological properties of real line. Functions, Countable, Uncountable sets and Uncountability of <math>\mathbf{R}</math>. Sequences and their convergence, Subsequences, monotonic sequences, bounded sequences, squeeze theorem Limits of some special sequences such as <math>r^n</math>, <math>(1 + \frac{1}{n})^n</math> and <math>\frac{1}{n^n}</math>, Concept of limsup and liminf. Infinite series, positive termed series and their convergence, Comparison test, ratio test and root test. Absolute convergence of series, Leibnitz's test for the convergence of alternating series, Conditional convergence, Rearrangement and Riemann's Theorem (Statement only). <b>31L</b></p> <p><b>Unit 2</b> Review of limit, Concepts of o and O. Continuity and Uniform Continuity and boundedness of a function. Differentiability, Indeterminate form, L' Hospital's rule. Darboux Theorem, Rolle's and Lagrange's Mean Value theorems. Taylor's theorem with Lagrange's and Cauchy's form of remainder(without proof). Taylor's and Maclaurin series expansions of <math>\sin x</math>, <math>\cos x</math>, <math>e^x</math>, <math>(1 + x)^n</math>, <math>\log(1+x)</math>. Maxima and Minima of Functions. Successive Differentiation. <b>25L</b></p> <p><b>Unit 3</b> Reimann Integration of Real valued Functions. Fundamental Theorem of Integral Calculus. Improper Integral, Convergence of Integrals, Simple tests. Beta and Gamma functions: properties and relationship between them. Sequence and series of functions: Pointwise &amp; Uniform convergence. Simple tests, Properties of Uniformly convergent functions. Power series. Sequences and Series of functions. <b>25L</b></p> <p><b>Unit 4</b> Functions of two variables and Partial Derivatives. Maxima and Minima of such Functions. Constrained Maximization and minimization, use of Lagrange Multiplier. Double Integral (intuitive-graphical approach), Multiple Integration, change of order of integration, transformation of variables and Jacobians (statement of relevant theorems and their uses). <b>15L</b></p>
List of Practical	Tutorials only

-------------------------	---

Semester	<b>THREE</b>
Paper Number	<b>STAT03C02</b>
Paper Title	<b>Sampling Distributions</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b>            Functions of Random Vectors (univariate distributions): Jacobian, Polar transformations and Orthogonal Transformations. Derivation of the sampling distribution of sample mean and variance for a normal population, standard errors of sample mean, sample variance and sample proportion.            Exact sampling distribution: Definition and derivation of p.d.f. of <math>\chi^2</math> with n degrees of freedom (d.f.), nature of p.d.f. curve for different degrees of freedom, mean, variance, m.g.f., additive property of <math>\chi^2</math> distribution.            Exact sampling distributions: Student's and Fisher's t-distributions, Derivation of its p.d.f., nature of probability curve with different degrees of freedom, mean, variance and limiting form of t distribution.            Snedecor's F-distribution: Derivation of p.d.f., nature of p.d.f. curve with different degrees of freedom, mean, variance. Distribution of <math>1/F</math> (<math>n_1, n_2</math>). Relationship between t, F and <math>\chi^2</math> distributions. <b>50L</b></p> <p><b>Unit 2</b>            Sampling distribution based on BVN: Distribution of sample correlation coefficient in the null case, regression coefficients and other related results with non-stochastic covariate.            Order Statistics: Introduction, distribution of the rth order statistic, smallest and largest order statistics. Joint distribution of rth and sth order statistics, distribution of sample median and sample range. <b>25L</b></p> <p><b>Unit 3</b>            Problems of Statistical Inference: Population &amp; parameter, random sample &amp; statistic, Point and Interval Estimation, Confidence level, Testing of Hypothesis, Null and alternative hypotheses, level of significance, Type I and Type II errors, their probabilities and critical region. <b>15L</b></p> <p><b>Unit 4</b>            Exact tests and confidence intervals: classical and p-value approaches. Binomial proportion(s), Poisson mean(s), Univariate Normal mean (s), standard deviation(s). Standard tests related to Bivariate normal parameters. <b>38L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Testing of significance for single proportion and difference of two proportions.</li> <li>2. Testing of significance for single Poisson mean and difference of means of two independent Poisson distributions.</li> <li>3. Testing of significance and confidence intervals for single mean and difference</li> </ol>

	<p>of two means and paired tests.</p> <p>4. Testing if the population variance has a specific value and its confidence intervals</p> <p>5. Testing of significance and confidence intervals of correlation coefficient.</p> <p>6. Testing of equality of population variances for two independent normal populations and related confidence intervals.</p> <p>7. Testing of ratio of variances for bivariate normal population and related confidence interval.</p> <p>8. Tests related to regression and related confidence intervals.</p>

Semester	<b>THREE</b>
Paper Number	<b>STAT03C03</b>
Paper Title	<b>Statistical Computing Using C/C++</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b></p> <p>Components, basic structure programming, character set, C/C++ tokens, Keywords and Identifiers and execution of a C/C++ program. Data types: Basic data types, Enumerated data types, derived data types. Constants and variables: declaration and assignment of variables, Symbolic Constants, overflow and underflow of data.</p> <p>Operators and Expressions: Arithmetic, relational, logical, assignment, increment/decrement, operators, precedence of operators in arithmetic, relational and logical expression. Implicit and explicit type conversions in expressions, library functions. Managing input and output operations: reading and printing formatted and unformatted data.</p> <p>Decision making and branching - if...else, nesting of if...else, else if ladder, switch, conditional (?) operator. Looping in C/C++: for, nested for, while, do...while, and jumps in and out of loops.</p> <p>Arrays: Declaration and initialization of one-dim and two-dim arrays. Character arrays and strings: Declaring and initializing string variables, reading and writing strings from Terminal (using scanf and printf only). <b>30L</b></p>

	<p><b>Unit 2</b></p> <p>User-defined functions: A multi-function program using user-defined functions, definition of functions, return values and their types, function prototypes and calls. Category of Functions : no arguments and no return values, arguments but no return values , arguments with return values, no arguments but returns a value, functions that return multiple values. Recursion function. Passing arrays to functions, Storage class of Variables.</p> <p>Pointers: Declaration and initialization of pointer variables, accessing the address of a variable, accessing a variable through its pointer, pointer expressions, pointer increments/decrement and scale factor. Pointers and arrays, arrays of pointers, pointers as function arguments, functions returning pointers</p> <p>Structure: Definition and declaring, initialization, accessing structure members, copying and comparison of structure variables, array of structures, structure pointers. Dynamic memory allocation functions: malloc, calloc and free.</p> <p>Pre-processors: Macro substitution, macro with argument</p> <p>File inclusion in C/C++: Defining and opening a file (only r, w and a modes), closing a file, I/O operations on files-fscanf and fprintf functions. <b>30L</b></p> <p><b>Unit 3</b></p> <p>Drawing of random sample from standard univariate discrete and continuous distributions, cdf inversion method, box-muller transformation, polar transformation. Drawing of random samples from mixture distribution and bivariate normal (conditional distribution approach). Acceptance rejection sampling.</p> <p>Monte Carlo Integration, Variance Reduction techniques. <b>35L</b></p> <p><b>Unit 4</b></p> <p>Numerical Analysis: Polynomials and Difference Tables. Approximation of functions and Weierstrass Theorem (statement). Lagrange and Newton formulae for Interpolation. Trapezoidal and Simpson's 1/3 Rules for approximations of definite integrals. Approximate solutions of Numerical Equations by Fixed-point Iteration and Newton-Raphson methods. Conditions of convergence. <b>33L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Roots of a quadratic equation (with imaginary roots also).</li> <li>2. Sorting of an array and hence finding median.</li> <li>3. Mean, Median and Mode of a Grouped Frequency Data.</li> <li>4. Variance and coefficient of variation of a Grouped Frequency Data.</li> <li>5. Preparing a frequency table.</li> <li>6. Value of n factorial using recursion.</li> <li>7. Random number generation from uniform, exponential, calculate sample mean and variance and compare with population parameters.</li> <li>8. Matrix addition, subtraction, multiplication, Transpose and Trace.</li> <li>9. Fitting of Binomial, Poisson distribution.</li> <li>10. Compute ranks and then calculate rank correlation (without tied ranks).</li> <li>11. Fitting of lines of regression.</li> <li>12. Numerical methods: Solving one-variable equations using Newton-Raphson method.</li> <li>13. Trapezoidal rule for numerical integration.</li> <li>14. Solving a linear system of equation.</li> <li>15. Generation of random samples from standard discrete and continuous distributions</li> </ol>

	16. Generation of random samples from mixture distributions 17. Generation of random samples from bivariate normal distribution. 18. General of random samples by acceptance rejection method. 19. Monte Carlo integration and related techniques.

Semester	<b>FOUR</b>
Paper Number	<b>STAT04C01</b>
Paper Title	<b>Survey Sampling and Indian Official Statistics</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b>          Concept of population and sample, complete enumeration versus sampling, sampling and non-sampling errors. Types of sampling: non-probability and probability sampling, basic principle of sample survey, simple random sampling with and without replacement, definition and procedure of selecting a sample, estimates of: population mean, total and proportion, variances of these estimates, estimates of their variances and sample size determination. <b>32L</b></p> <p><b>Unit 2</b>          Stratified random sampling: Technique, estimates of population mean and total, variances of these estimates, proportional and optimum allocations and their comparison with SRS. Practical difficulties in allocation, estimation of gain in precision, post stratification and its performance. Systematic Sampling: Technique, estimates of population mean and total, variances of these estimates (<math>N=n \times k</math>). Comparison of systematic sampling with SRS and stratified sampling in the presence of linear trend and corrections. <b>32L</b></p> <p><b>Unit 3</b>          Introduction to Ratio and regression methods of estimation, estimation of the population mean and total (for SRS of large size), MSE of these estimates and estimates of these variances, MSE in terms of correlation coefficient for regression method of estimation and their comparison with SRS. Cluster sampling (equal clusters only) estimation of population mean and its variance, comparison (with and without randomly formed clusters). Concept of sub sampling. Two-stage Sampling, Estimation of Population mean and variance of the estimate, Randomized Response Technique: Warner Model. <b>32L</b></p>

	<p><b>Unit 4</b></p> <p>An outline of present official statistical system in India, Methods of collection of official statistics, their reliability and limitations. Role of Ministry of Statistics &amp; Program Implementation (MoSPI), Central Statistical Office (CSO), National Sample Survey Office (NSSO), Registered General Office and National Statistical Commission. Government of India's Principal publications containing data on the topics such as Agriculture, price, population, industry, finance and employment Consumer price Index, Wholesale price index number and index of industrial production. National Income: Basic idea and a brief description of income, expenditure and production approaches. <b>32L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. To select an SRS with and without replacement from finite populations, theoretical populations and given geometrical shapes.</li> <li>2. For a population of size 5, estimate population mean, population mean square and population variance. Enumerate all possible samples of size 2 by WR and WOR and establish all properties relative to SRS.</li> <li>3. For SRSWOR, estimate mean, standard error and the sample size</li> <li>4. Stratified Sampling: allocation of sample to strata by Proportional and Neyman's methods. Compare the efficiencies of above two methods relative to SRS.</li> <li>5. Estimation of gain in precision in stratified sampling.</li> <li>6. Comparison of systematic sampling with stratified sampling and SRS in the presence of a linear trend.</li> <li>7. Ratio and Regression estimation: Calculate the population mean or total of the population. Calculate mean squares. Compare the efficiencies of ratio and regression estimators relative to SRS.</li> <li>8. Cluster sampling: estimation of mean or total, variance of the estimate, estimate of intra-class correlation coefficient, efficiency as compared to SRS.</li> <li>9. Two stage sampling.</li> </ol>
Reading/Reference Lists	<ol style="list-style-type: none"> <li>1. Cochran, W.G. (1984): Sampling Techniques (3rd Ed.), Wiley Eastern.</li> <li>2. Sukhatme, P.V., Sukhatme, B.V. Sukhatme, S. Asok, C. Semester	<b>FOUR</b>
Paper Number	<b>STAT04C02</b>
Paper Title	<b>Statistical Quality Control and Demography</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b></p> <p>Definition, dimensions of quality. Quality system and standards: Introduction to ISO quality standards, Quality registration. Statistical Process Control - Seven tools of SPC, chance and assignable Causes of quality variation. Statistical Control Charts- Construction and Statistical basis of 3-<math>\sigma</math> Control charts, Rational Sub-grouping and different control charts. Comparison between control charts for variables and control charts for attributes. Analysis of patterns on control chart. Estimation of process capability. <b>30L</b></p> <p><b>Unit 2</b></p> <p>Principle of acceptance sampling plans. Single and Double sampling plan their OC, AQL, LTPD, AOQ, AOQL, ASN, ATI functions with graphical interpretation, use and interpretation of Dodge and Romig's sampling inspection plan tables. <b>30L</b></p> <p><b>Unit 3</b></p> <p>Introduction and sources of collecting data on vital statistics, errors in census and registration data. Measurement of population, rate and ratio of vital events. Measurements of Mortality: Crude Death Rate (CDR), Specific Death Rate (SDR), Infant Mortality, Rate (IMR) and Standardized Death Rates. Stationary and Stable population, Central Mortality Rates and Force of Mortality. Life (Mortality) Tables: Assumption, description, construction of Life Tables and Uses of Life Tables. Measurements of Fertility: Crude Birth Rate (CBR), General Fertility Rate (GFR), Specific Fertility Rate (SFR) and Total Fertility Rate (TFR). <b>35L</b></p> <p><b>Unit 4</b></p> <p>Measurement of Population Growth Theory: Crude rates of natural increase, Pearl's Vital Index, Gross Reproduction Rate (GRR) and Net Reproduction Rate (NRR). Population Estimation, Projection and Forecasting: Use of A.P. and G.P. methods for population estimates, Fitting of Logistic curve for population forecasting using Rhode's method. <b>33L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. To calculate CDR and ASDR for a given set of data</li> <li>2. To find STDR by direct and indirect methods</li> <li>3. To construct a complete life table.</li> <li>4. To fill in the missing entries of a life table.</li> <li>5. To calculate probabilities of death at pivotal ages and use it to construct abridged life table using (i) Reed-Merrell method, (ii) Greville's method and (iii) King's method.</li> <li>6. To calculate CBR, GFR, SFR, TFR for a given set of data.</li> <li>7. To calculate crude rate of Natural Increase and Pearle's Vital index for a given set of data.</li> </ol>

	<ol style="list-style-type: none"> <li>8. Calculate GRR and NRR for a given set of data and compare them.</li> <li>9. Population Estimation and Projection</li> <li>10. Fitting of logistic equation by Rhode`s method</li> <li>11. Construction and Interpretation of statistical control charts</li> <li>12. X-bar &amp; R chart, X-bar &amp; s-chart, np- chart, p-chart, c-chart, u- chart</li> <li>13. Single sample inspection plan: Construction and interpretation of OC, AQL, LTPD, ASN, ATI, AOQ, AOQL curves.</li> <li>14. Calculation of process capability and comparison of 3-sigma control limits with specification limits.</li> </ol>
Reading/ Reference List	<ol style="list-style-type: none"> <li>1. Montgomery, D.C. (2009): Introduction to Statistical Quality control, 6<sup>th</sup> edition, Wiley India, Pvt Ltd</li> <li>2. Semester	<b>FOUR</b>
Paper Number	<b>STAT04C03</b>
Paper Title	<b>Statistical Inference</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b>            Estimation: Concepts of estimation, unbiasedness, sufficiency, consistency and efficiency. Factorization theorem. Complete statistic, Minimum variance unbiased estimator (MVUE), Necessary and Sufficient condition for UMVUE, Rao-Blackwell and Lehmann-Scheffe theorems and their applications. Cramer-Rao inequality (statement and applications) and MVB estimators.            Methods of Estimation: Method of moments, method of maximum likelihood estimation, method of least square, method of minimum Chi-square and statements of their properties <b>40L</b></p> <p><b>Unit 2</b>            Concept of test function and randomized test, Review of level of significance, power and power curve. Most powerful test, uniformly most powerful test, Neyman- Pearson Lemma (statement and proof of sufficiency part only) and its applications to construct uniformly most powerful test, unbiased test (definition only). Likelihood ratio test, properties of likelihood ratio tests (without proof). <b>35L</b></p>

	<p><b>Unit 3</b> Confidence intervals, Confidence set, Shortest length confidence interval, Concepts of Uniformly Most Accurate (UMA) confidence sets, relationship with tests of hypotheses. <b>15L</b></p> <p><b>Unit 4</b> Delta Method, Derivation and uses of large sample standard error of sample moments, Standard deviation, Coefficient of Variation, <math>b_1</math> &amp; <math>b_2</math> measures, Correlation coefficient. Asymptotic distribution of sample quantiles. Transformations of Statistics to stabilize variance: derivation and uses of Sin-1, square root. Uses of logarithmic and z-transformations. Large sample tests for binomial proportions, Poisson means (single and two independent samples cases) and correlation coefficients. Large Sample distribution of Pearsonian <math>\chi^2</math> –statistic and its uses. <b>38L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Maximum Likelihood Estimation</li> <li>2. Estimation by the method of moments, minimum Chi-square</li> <li>3. Most powerful critical region (NP Lemma)</li> <li>4. Uniformly most powerful critical region</li> <li>5. Unbiased critical region</li> <li>6. Power curves</li> <li>7. Likelihood ratio tests for simple null hypothesis against simple alternative hypothesis</li> <li>8. Likelihood ratio tests for simple null hypothesis against composite alternative hypothesis</li> <li>9. Asymptotic properties of LR tests</li> <li>10. Testing of significance and confidence intervals for single proportion and difference of two proportions using CLT.</li> <li>11. Testing of significance and confidence intervals for single Poisson mean and difference of two Poisson means using CLT.</li> <li>12. Testing of significance and confidence intervals concerning sample standard deviation, coefficient of variation and correlation coefficient (both single sample and two sample cases).</li> <li>13. Testing of significance and confidence intervals using variance stabilizing transformations.</li> <li>14. Determination of the minimum sample size required to achieve normality by sample proportion, mean and standard deviation.</li> <li>15. Tests for goodness of fit, independence and homogeneity using Pearsonian chi-square statistic.</li> </ol>
Reading/Reference Lists	<ol style="list-style-type: none"> <li>1. Rohatgi V.K. (1984): An Intro. to Probability Theory &amp; Math. Statistics</li> <li>2. Semester	<b>FIVE</b>
Paper Number	<b>STAT05C02</b>
Paper Title	<b>Linear Models</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Gauss-Markov set-up: Theory of linear estimation, Estimability of linear parametric functions, Method of least squares, Gauss-Markov theorem, Estimation of error variance. Fundamental Theorems on least squares (statements only), General Linear Hypothesis: Testing and confidence interval. <b>25L</b></p> <p><b>Unit 2</b> Analysis of variance: Definitions of fixed-, random- and mixed-effects models, analysis of variance and covariance in one-way classified data for fixed-effects models, analysis of variance and covariance (with one concomitant variable) in two-way classified data with equal number of observations per cell for fixed-effects models. Analysis of variance one-way classified data for random effect models. <b>48L</b></p> <p><b>Unit 3</b> Regression analysis: Estimation and hypothesis testing in case of simple and multiple regression models. Tests for parallelism and identity, linearity of simple regression. Generalization of linear models: Logistic regression for binary responses, Scoring method of estimation, Poisson Regression. <b>35L</b></p> <p><b>Unit 4</b> Regression Diagnostics: Model checking: Prediction from a fitted model, Violation of usual assumptions concerning normality, Homoscedasticity and collinearity, Diagnostics using quantile-quantile plots. <b>20L</b></p>
List of Practical	<p><i>Some practical problems are to be done preferably by using R/ statistical packages.</i></p> <ol style="list-style-type: none"> <li>1. Estimability when X is a full rank matrix and not a full rank matrix.</li> <li>2. Simple linear regression.</li> <li>3. Multiple regression.</li> <li>4. Tests for linear hypothesis.</li> <li>5. Analysis of variance of one-way classified data.</li> <li>6. Analysis of variance of a two-way classified data with one observation per cell.</li> <li>7. Analysis of variance of a two-way classified data with equal number of observations per cell.</li> </ol>

	<p>8. Analysis of covariance of a one-way classified data with one concomitant variable.</p> <p>9. Analysis of covariance of a two-way classified data with one concomitant variable.</p> <p>10. Hypothesis testing in case of simple and multiple regression models and related tests.</p> <p>11. Fitting of linear model using R/ statistical package</p> <p>12. Regression diagnostics and checking model assumptions using R/statistical package.</p> <p>13. Fitting of logistic regression model using R / statistical package</p>

Semester	<b>SIX</b>
Paper Number	<b>STAT06C02</b>
Paper Title	<b>Time Series Analysis and Index Numbers</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Introduction to time series data, application of time series from various fields. Modelling time series as deterministic function plus IID errors: Components of a time series (trend, cyclical and seasonal patterns, random error) Decomposition of time series. Estimation of trend: free hand curve method, method of moving averages, fitting various mathematical curves and growth curves. Effect of elimination of trend on other components of the time series. Estimation of seasonal component by Method of simple averages, Notions of multiplicative models: ratio to Trend. <b>35L</b></p> <p><b>Unit 2</b> Introduction to stochastic modelling: Concept of stationarity. Illustration of how a stationary time series may show temporal patterns. Stationarity in mean. Box-Jenkins modelling: Moving-average (MA) process and Autoregressive (AR) process of orders one and two. ACF, PACF and their graphical use in guessing the order of AR and MA processes. Estimation of the parameters of AR (1) and AR (2) using Yule-Walker equations. <b>45L</b></p>

	<p><b>Unit 3</b> Forecasting: Exponential smoothing methods, Short term forecasting methods: Brown's discounted regression. <b>15L</b></p> <p><b>Unit 4</b> Index Numbers: Price, Quantity and Value indices. Price Index Numbers: Construction, Uses, Limitations, Tests for index numbers, Various formulae and their comparisons, Chain-Index Numbers. Some Important Indices: Consumer Price Index, Wholesale Price Index and Index of Industrial Production – formulae and uses. <b>33L</b></p>
<p>List of Practical</p>	<p><i>Some practical problems are to be done preferably by using R/ statistical packages.</i></p> <ol style="list-style-type: none"> <li>1. Plotting a real life time series, and detecting various features (trend, periodic behaviours etc.). Suggested data sets:             <ol style="list-style-type: none"> <li>a. Sun spot data</li> <li>b. Dollar-Rupee exchange rates</li> <li>c. Stock market data</li> </ol> </li> <li>2. Fitting and plotting of mathematical curves:             <ol style="list-style-type: none"> <li>a. modified exponential curve</li> <li>b. Gompertz curve</li> </ol> </li> <li>3. Fitting of trend by Moving Average Method.</li> <li>4. Plotting detrended series.</li> <li>5. Measurement of Seasonal indices Ratio-to-Moving Average method.</li> <li>6. Plotting ACF and PACF of a given time series.</li> <li>7. Using Yule-Walker equation to fit AR (1) and AR (2) models to real life data.</li> <li>8. Forecasting by short term forecasting methods.</li> <li>9. Forecasting by exponential smoothing.</li> <li>10. Calculate price and quantity index numbers using simple and weighted average of price relatives.</li> <li>11. To calculate the Chain Base index numbers.</li> <li>12. Problems on cost of living index numbers.</li> </ol>
<p>Reading/Reference Lists</p>	<ol style="list-style-type: none"> <li>1. Gun, Gupta and Dasgupta (2002) Fundamentals of Statistics Vol II, World Press</li> <li>2. ### Skill Enhancement Elective papers in Statistics

Elective papers to be offered in a semester will be decided every year solely by the departmental committee. This will be intimated before the commencement of classes in the relevant semester.

Semester	<b>THREE</b>
Paper Number	<b>STAT03SEE</b>
Paper Title	<b>Data Analysis using Excel and R</b>
No. of Credits	<b>4</b>
No. of classes	Theory: 0 Practical: 8
Syllabus	<p><i>This course will review and expand upon core topics in statistics and probability, particularly by initiating the beneficiaries of the course to use of spreadsheet and R.</i></p> <p><b>Unit 1</b> Use of Excel: Creating grouped frequency distribution, different diagrammatic representations, Data manipulation: Subsetting a data, sorting, searching and creating new variables, Basic summary measures, Linear regression. Logical commands: IF, AND, NOT, OR etc. <b>30L</b></p> <p><b>Unit 2</b> Introduction to R: Installation, command line environment, overview of capabilities, brief mention of open source philosophy. R as a calculator: The four basic arithmetic operations. Use of parentheses nesting up to arbitrary level. The power operation. Evaluation of simple expressions. Quotient and remainder operations for integers. Standard functions, e.g., sin, cos, exp, log., Different types of numbers in R: Division by zero leading to Infor -Inf. NaN. NA. Use of R scripts, R libraries: what is an r library?, how to load and use a library how to get help- documentation and vignettes. Some useful inbuilt functions: getwd(), setwd(), source() <b>16L</b></p> <p><b>Unit 3</b> Variables in R. Creating a vector using c(), seq() and colon operator. Basic operations on vectors. Matrix operations in R: Creation. Basic operations. Extracting submatrices through indexing. Dataframes and Lists, Difference between matrices, dataframes and lists. Loading data from a file: read.table() and read.csv(), creation of new variables, categorisation cut, factor; round, apply. Working with dataframes: accessing by variable names, subsetting, transformation of variables. plot() command, histogram, barplot, boxplot, points, lines, segments, arrows, paste inserting mathematical symbols in a plot, pie diagram. customisation of plot: setting graphical parameters from par(). <b>44L</b></p> <p><b>Unit 4</b> Basic summary statistics, Usual tests of significance and confidence intervals. Use</p>

	<p>of table() to create frequency distributions.          Linear regression: Estimation, finding predicted values, plotting the regression line on scatterplot.          Use of apply() and related functions.          Problems on discrete and continuous probability distributions.          Generation of reports using Latex: Suggested Editors – Lyx/ Kile/ Texnic-center.          Use of R package Knitr/ Markdown to produce reports, Case study using any inbuilt or external dataset to understand and apply the statistical techniques discussed in R and prepare a report. <b>38L</b></p>
Reading/ Reference list	<ol style="list-style-type: none"> <li>1. The R Cookbook, by Paul Teetor</li> <li>2. The R Graphics Cookbook, by Winston Chang</li> <li>3. Data Manipulation with R, by Phil Spector</li> <li>4. Quick R (freely available at <a href="https://www.statmethods.net/">https://www.statmethods.net/</a> )</li> </ol>

Semester	<b>THREE</b>
Paper Number	<b>STAT03SEE</b>
Paper Title	<b>Data Analysis using software packages</b>
No. of Credits	<b>4</b>
No. of classes	Theory: 0 Practical: 8
Syllabus	<p><i>This course will review and expand upon core topics in statistics and probability, particularly by initiating the beneficiaries of the course to at least one of the software packages viz., SPSS, Minitab for statistical computing.</i></p> <p><b>Unit 1</b>          Learn how to load data, plot a graph viz. histograms (equal class intervals and unequal class intervals), box plot, stem-leaf, frequency polygon, pie chart, ogives with graphical summaries of data <b>32L</b></p> <p><b>Unit 2</b>          Generate automated reports giving detailed descriptive statistics, correlation and lines of regression. <b>32L</b></p> <p><b>Unit 3</b>          Random number generation and sampling procedures. Fitting of polynomials and exponential curves. Application Problems based on fitting of suitable distribution, Normal probability plot. <b>32L</b></p> <p><b>Unit 4</b>          Simple analysis and create and manage statistical analysis projects, import data, code editing, Basics of statistical inference in order to understand hypothesis testing and compute p-values and confidence intervals. <b>32L</b></p>

Reading/ Reference list	<ol style="list-style-type: none"> <li>1. Moore, D.S. and McCabe, G.P. and Craig, B.A. (2014): Introduction to the Practice of Statistics, W.H. Freeman</li> <li>2. Cunningham, B.J (2012):Using SPSS: An Interactive Hands-on approach</li> </ol>
-------------------------	--

Semester	<b>FOUR</b>
Paper Number	<b>STAT04SEE</b>
Paper Title	<b>Advanced Statistical Computing using R</b>
No. of Credits	<b>4</b>
No. of classes	Theory: 0 Practical: 8
Syllabus	<p><i>This course will enable students to learn programming skills in R and use simulation techniques to understand some core concepts of probability and statistics.</i></p> <p><i>A part of this course also enhances database handling through SQL and R.</i></p> <p><b>Unit 1</b> Programming in R: Use of if and ifelse, Loops in R, avoiding iteration with "vectorized" operations and functions, writing functions in R, setting default values of arguments of a function.</p> <p>Debugging and testing, checking compatibility of arguments in function and print error/warning messages. <b>24L</b></p> <p><b>Unit 2</b> Using the computer for random number generation (treated as a black box). Generation of random samples from univariate discrete and continuous probability distributions, cdf inversion method, box-muller transformation.</p> <p>Simulation of random variables from mixture distribution, simulating bivariate normal random variable (using conditional approach), Acceptance rejection sampling. <b>22L</b></p> <p><b>Unit 3</b> Simulating random experiments like coin tossing, rolling of a die, card shuffling to illustrate probabilities of different events. Monte Carlo integration, Basic idea of importance sampling. Finding probabilities and moments using simulation. Approximating the value of pi by simulating dart throwing. Approximating the expectation of a given function of a random variable using simulation. Graphical demonstration of the Law of Large Numbers and Central limit theorem. Using simulation to compute the level of significance, power, critical value and p-value of tests. <b>46L</b></p> <p><b>Unit 4</b> Advance data manipulation in R: Reading and writing non-R formats. Importing data from the Web, Selective access to data, applying the same function to all parts</p>

	<p>of a data object. Transforming the data, merging dataframes, reshaping dataframes from wide to long or long to wide. Split-apply-combine technique in R, Use of plyr functions. Basic concepts of relational databases; how a database is like an R dataframe. The client/server model. The structured query language (SQL) and queries; SELECT and JOIN. R/SQL translations. Accessing databases through R. <b>36L</b></p>

Semester	<b>FOUR</b>
Paper Number	<b>STAT04SEE</b>
Paper Title	<b>Research Methodology</b>
No. of Credits	<b>4</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> What is Research? Role of Research in important areas. Characteristics of Scientific Method. Process of research: Stating Hypothesis or Research question, Concepts &amp; Constructs, Units of analysis &amp; characteristics of interest, Independent and Dependent variables, Extraneous or Confounding variables. Measurements and scales of Measurements. Types of research: Qualitative &amp; Quantitative Research, Longitudinal Research, Survey &amp; Experimental Research. <b>24L</b></p> <p><b>Unit 2</b> Survey Methodology and Data Collection, sampling frames and coverage error, non-response. <b>24L</b></p> <p><b>Unit 3</b> Review of various techniques for data analysis covered in core statistics papers, techniques of interpretation, precaution in interpretation. <b>40L</b></p> <p><b>Unit 4</b> Develop a questionnaire, collect survey data pertaining to a research problem (such as gender discriminations in private v/s government sector, unemployment rates, removal of subsidy, impact on service class v/s unorganized sectors), questions and answers in surveys, Internal &amp; External validity, , interpret the results and draw inferences. Formats and presentations of Reports – an overview. <b>40L</b></p>

### Discipline Specific Elective Papers in Statistics

Elective papers to be offered in a semester will be decided every year solely by the departmental committee. This will be intimated before the commencement of classes in the relevant semester.

Group-1	
Paper Number	<b>01</b>
Paper Title	<b>Stochastic Processes and Queuing Theory</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Stochastic Process: Introduction, Stationary Process. <span style="float: right;"><b>10L</b></span></p> <p><b>Unit 2</b> Markov Chains: Definition of Markov Chain, Examples including 2-state chain, random walk, etc., Transition probability matrix, order of Markov chain, Markov chain as graphs, Generalization of independent Bernoulli trials, classification of states and chains, stability of Markov system. <span style="float: right;"><b>45L</b></span></p> <p><b>Unit 3</b> Poisson Process: postulates of Poisson process, properties of Poisson process, inter-arrival time, pure birth process, Yule Furry process, birth and death process, pure death process. <span style="float: right;"><b>45L</b></span></p> <p><b>Unit 4</b> Queuing System: General concept, steady state distribution, queuing model, M/M/1 with finite and infinite system capacity, waiting time distribution (without proof). <span style="float: right;"><b>28L</b></span></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Calculation of transition probability matrix.</li> <li>2. Identification of characteristics of reducible and irreducible chains.</li> <li>3. Identification of types of classes.</li> <li>4. Identification of ergodic transition probability matrix</li> <li>5. Stationarity of Markov chain.</li> <li>6. Computation of probabilities in case of generalizations of independent Bernoulli trials.</li> <li>7. Calculation of probabilities for given birth and death rates and vice versa.</li> <li>8. Calculation of probabilities for Birth and Death Process.</li> <li>9. Calculation of probabilities for Yule Furry Process.</li> <li>10. Computation of inter-arrival time for a Poisson process.</li> <li>11. Calculation of Probability and parameters for (M/M/1) model and change in</li> </ol>

	behaviour of queue as N tends to infinity.
Reading/Reference Lists	<ol style="list-style-type: none"> <li>1. P. G. Hoel, S. C. Port and C. J. Stone: Introduction to Stochastic Processes</li> <li>2. Medhi, J. (2009): Stochastic Processes, New Age International Publishers.</li> <li>3. S. Karlin and H.M.Taylor: A first course in stochastic process.</li> <li>4. S. Ross: Stochastic Process</li> <li>5. J. G. Kemeny, J. L. Snell and A. W. Knapp: Finite Markov Chains.</li> <li>6. Bhat,B.R.(2000): Stochastic Models: Analysis and Applications, New Age International Publishers.</li> <li>7. Taha, H. Waymire: Stochastic Process and Applications.</li> </ol>

Group-1	
Paper Number	02
Paper Title	Econometrics
No. of Credits	6
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> <i>What is Econometrics:</i> Comparing mathematical and econometric model with illustrative examples – consumption and production function, Stages of econometric methodology, Review of linear model and assumptions. Dummy variable regression model and qualitative data. <b>25L</b></p> <p><b>Unit 2</b> <i>Outlier detection:</i> Outlier and influential observations, residuals and leverages, DFBETA, DFFIT and Cook’s distance. <i>Heteroscedasticity:</i> Nature of heteroscedasticity – illustrative examples, OLS method under heteroscedasticity and its consequences, detecting heteroscedasticity – residual plot, Glejser test, Goldfeld-Quandt test, remedial measure through variable transformation and generalized least squares (GLS). <b>35L</b></p> <p><b>Unit 3</b> <i>Autocorrelation:</i> Nature of autocorrelation – illustrative examples, OLS method under autocorrelation – AR(1) model, detecting autocorrelation – residual plot, Runs test, Durbin-Watson test, GLS method for correcting autocorrelation. <i>Multicollinearity:</i> Nature of multicollinearity – illustrative examples, OLS method under perfect multicollinearity and its consequences, detecting multicollinearity – thumb rules based on <math>R^2</math>, pair-wise and partial correlations, remedial measures via more data, dropping and transformation of variables. <b>35L</b></p> <p><b>Unit 4</b> <i>Model Selection:</i> Adjusted <math>R^2</math>, Mallow’s <math>C_p</math> criteria, AIC. Best subset selection, Step-</p>

	wise regression methods. <b>Checking for normality:</b> Q-Q plots, Normal Probability plot, Kolmogorov-Smirnov test and Shapiro-Wilks test. <b>33L</b>
List of Practical	<i>The entire practical are to be done preferably by using R/ statistical packages.</i> 1. Fitting of ordinary linear regression equations with diagnostics. 2. Tests of heteroscedasticity. 3. Fitting of regression equation after making adjustments for heteroscedasticity. 4. Tests of autocorrelation. 5. Fitting of regression equation after making adjustments for autocorrelation. 6. Tests of multicollinearity. 7. Fitting of regression equation after making adjustments for multicollinearity.
Reading/Reference Lists	1. G.S. Maddala: Introduction to Econometrics 2. D.N. Gujarati: Basic Econometrics 3. J. Johnston and J. Dinardo: Econometric Methods

Group-1	
Paper Number	<b>03</b>
Paper Title	<b>Advanced Statistical Methods</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Review of linear regression models, Two goals- Prediction and Inference, Comparison of parametric and Non-parametric regression models in this context. Concept of smoothing, Bias and Variance trade-off, Linear regression as linear smoothers - criticism, Other linear smoothers - Nearest Neighbour Regression, Kernel Regression and Spline with one covariate (only statements of results). Prediction error in regression models, in-sample error and generalization error, splitting of dataset (training set and test set) and idea of cross-validation. Selection of tuning parameters (degree of polynomial for polynomial regression, choice of K in K-NN and bandwidth in kernel regression) through cross-validation. <b>40L</b></p> <p><b>Unit 2</b> Density estimation: Histogram, Empirical Distribution function and Glivenko-Cantelli Lemma (Statement only), Kernel density estimates- Bias and Variance, Choice of band width. Introduction to Jackknife and Bootstrap, Bias reduction using Jackknife, Estimate of bias of standard statistics, Bootstrap sampling distribution of standard statistics, Bootstrap in regression models. Missing data analysis: MCAR, MAR and NMAR, Brief discussion on Imputation techniques, EM algorithm and properties (statement only), application to mixture models. <b>48L</b></p> <p><b>Unit 3</b> Circular Data: Applications and Background, Measure of Centre, Circular Distance and Measure of Dispersion, Higher Moments. Circular Correlation and Regression: Circular Correlation Measure, Rank Correlation,</p>

	<p>Circular-Linear Correlation, Circular-Circular Regression, Linear-Circular Regression. <b>20L</b></p> <p><b>Unit 4</b>            Circular Probability Distributions: Some Methods of Obtaining Circular Distributions, Uniform Distribution, Cardioid Distribution, Circular Normal (CN) Distribution, Wrapped Normal (WN) Distribution, Wrapped Cauchy (WC) Distribution.            Sampling Distribution (Statement and Use only) and Estimation of parameters for Circular Normal (CN) Distribution <b>20L</b></p>
List of Practical	<p><i>The entire practical are to be done preferably by using R/ statistical packages.</i></p> <ol style="list-style-type: none"> <li>1. Case study using linear regression to demonstrate the inferential aspects.</li> <li>2. Simulation of bias, variance and prediction error in case of linear regression.</li> <li>3. Plotting the prediction error, bias and variance as function of tuning parameters through simulation (for all linear smoothers).</li> <li>4. K- fold cross validation to estimate the error in linear smoothers.</li> <li>5. Fitting of K-NN, Kernel regression and spline models.</li> <li>6. Kernel density estimates</li> <li>7. Jackknife and Bootstrap</li> <li>8. Standard applications of EM algorithm.</li> <li>9. Visualization of circular data.</li> <li>10. Summary measures of circular data</li> <li>11. Regression for circular data.</li> </ol>

Group-2	
Paper Number	<b>01</b>
Paper Title	<b>Survival Analysis and Biostatistics</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b>            Survival Analysis: Functions of survival times, survival distributions and their applications, exponential, gamma, Weibull, Rayleigh, lognormal, death density function for a distribution having bath-tub shaped hazard function. Censoring Schemes: Type I, Type II and progressive or random censoring with biological examples. Estimation of mean survival time and variance of the estimator for Type</p>

	<p>I and Type II censored data with numerical examples. Non-parametric methods: Actuarial and Kaplan-Meier methods for estimating survival function and variance of the Estimator. <b>45L</b></p> <p><b>Unit 2</b> Competing Risk Theory: Indices for measurement of probability of death under competing risks and their inter-relations. Estimation of probabilities of death using maximum likelihood principle and modified minimum Chi-square methods. Theory of independent and dependent risks. Bivariate normal dependent risk model. <b>30L</b></p> <p><b>Unit 3</b> Stochastic Epidemic Models: Simple epidemic models, general epidemic model definition and concept (without derivation). Duration of an epidemic. <b>20L</b></p> <p><b>Unit 4</b> What is clinical trial? Different phases; Major steps of executing a controlled clinical trial; Type of control groups; Blinding; Bias; Ethics of randomization. Determination of trial size; Randomized clinical trial; Balancing treatment assignments; Complete and restricted randomization; Random allocation rule; Truncated binomial design. Concepts of covariate-adaptive and response-adaptive randomization with examples. <b>33L</b></p>
<p>List of Practical</p>	<p><i>The entire practical are to be done preferably by using R/ statistical packages.</i></p> <ol style="list-style-type: none"> <li>1. To estimate survival function</li> <li>2. To determine death density function and hazard function</li> <li>3. To identify type of censoring and to estimate survival time for type I censored data</li> <li>4. To identify type of censoring and to estimate survival time for type II censored data</li> <li>5. To identify type of censoring and to estimate survival time for progressively type I censored data</li> <li>6. To estimate survival time for progressively type I censored data</li> <li>7. Estimation of mean survival time and variance of the estimator for type I censored data</li> <li>8. Estimation of mean survival time and variance of the estimator for type II censored data</li> <li>9. Estimation of mean survival time and variance of the estimator for progressively type I censored data</li> <li>10. To estimate the survival function and variance of the estimator using Non-parametric methods with Actuarial methods</li> <li>11. To estimate the survival function and variance of the estimator using Non-parametric methods with Kaplan-Meier method</li> <li>12. To estimate Crude probability of death</li> <li>13. To estimate Net-type I probability of death</li> <li>14. To estimate Net-type II probability of death</li> <li>15. To estimate partially crude probability of death</li> <li>16. Group-2	
Paper Number	<b>02</b>
Paper Title	<b>Advanced Mathematical Analysis</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 5 Tutorial:1
Syllabus	<p><b>Unit 1</b> Intuitive set theory; partial order; equivalence relations and partitions; Countable and uncountable sets; Zorn's lemma and the well ordering principle (Statement only) Elements of metric space theory: sequences and Cauchy sequences and the notion of completeness, construction of real numbers, elementary topological notions for metric spaces: open sets, closed sets, compact sets, connectedness, continuous and uniformly continuous functions on a metric space. The Bolzano - Weierstrass theorem, supremum and infimum on compact sets. Separability, Completeness. <b>35L</b></p> <p><b>Unit 2</b> Introduction to Group Theory: Definition, Elementary properties using definition, integral powers of elements, Subgroups, Cyclic group, Groups of Permutations. Definition of Ring, Special types of Rings: Integral Domain, Field, elementary results. <b>15L</b></p> <p><b>Unit 3</b> Review of Axiomatic approach of vector spaces, Inner product spaces, Orthogonal complement and Projections. Expectation as inner product and application in statistics. Hilbert spaces, Applications in statistics, Introduction to fourier series. <b>15L</b></p> <p><b>Unit 4</b> Analytic function, Cauchy-Riemann equations. Statement of Cauchy theorem and of Cauchy integral formula with applications, Taylor's series. Singularities, Laurent series. Residue and contour integration. Fourier and Laplace transforms. Application in characteristic functions. <b>31L</b></p>

Group-2	
Paper Number	<b>03</b>
Paper Title	<b>Operations Research</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Introduction to Operations Research, phases of O.R., model building, various types of O.R. problems. Linear Programming Problem, Mathematical formulation of the L.P.P, graphical solutions of a L.P.P. Simplex method for solving L.P.P. Charne’s M-technique for solving L.P.P. involving artificial variables. Special cases of L.P.P. Concept of Duality in L.P.P: Dual simplex method. <b>40L</b></p> <p><b>Unit 2</b> Transportation Problem: Initial solution by North West corner rule, Least cost method and Vogel’s approximation method (VAM), MODI’s method to find the optimal solution, special cases of transportation problem. Assignment problem: Hungarian method to find optimal assignment, special cases of assignment problem. <b>35L</b></p> <p><b>Unit 3</b> Game theory: Rectangular game, minimax-maximin principle, solution to rectangular game using graphical method, dominance and modified dominance property to reduce the game matrix and solution to rectangular game with mixed strategy. <b>20L</b></p> <p><b>Unit 4</b> Inventory Management: ABC inventory system, characteristics of inventory system. EOQ Model and its variations, with and without shortages, Quantity Discount Model with price breaks. <b>31L</b></p>
List of Practical (Using TORA/WINQSB/LINGO)	<ol style="list-style-type: none"> <li>1. Mathematical formulation of L.P.P and solving the problem using graphical method, Simplex technique and Charne’s Big M method involving artificial variables.</li> <li>2. Identifying Special cases by Graphical and Simplex method and interpretation               <ol style="list-style-type: none"> <li>1. Degenerate solution</li> <li>2. Unbounded solution</li> </ol> </li> </ol>

	<ol style="list-style-type: none"> <li>3. Alternate solution</li> <li>4. Infeasible solution</li> <li>3. Allocation problem using Transportation model.</li> <li>4. Allocation problem using Assignment model.</li> <li>5. Problems based on game matrix.</li> <li>6. Graphical solution to <math>m \times 2 / 2 \times n</math> rectangular game.</li> <li>7. Mixed strategy.</li> <li>8. To find optimal inventory policy for EOQ models and its variations.</li> <li>9. To solve all-units quantity discounts model.</li> </ol>

Group-2	
Paper Number	<b>04</b>
Paper Title	<b>Project Work</b>
No. of Credits	<b>6</b>
No. of classes	<b>8</b>
Syllabus	The aim of the course is to initiate students to write and present a statistical report, under the supervision of a faculty, on some area of human interest. The project work will provide hands on training to the students to deal with data emanating from some real life situation and propel them to dwell on some theory or relate it to some theoretical concepts.

**Generic Elective**

Semester	
Paper Number	<b>STAT01GE01</b>
Paper Title	<b>Statistical Methods</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>Unit 1</b> Introduction: Definition and scope of Statistics, concepts of statistical population and sample. Data: quantitative and qualitative, attributes, variables, scales of measurement - nominal, ordinal, interval and ratio. Presentation: tabular and graphic, including histogram and ogives. <b>35L</b></p> <p><b>Unit 2</b> Measures of Central Tendency: mathematical and positional. Measures of Dispersion: range, quartile deviation, mean deviation, standard deviation, coefficient of variation, moments, skewness and kurtosis. <b>40L</b></p> <p><b>Unit 3</b> Bivariate data: Definition, scatter diagram, simple, partial and multiple correlation (3 variables only), rank correlation. Simple linear regression, principle of least squares and fitting of polynomials and exponential curves. <b>30L</b></p> <p><b>Unit 4</b> Theory of attributes, consistency of data, independence and association of attributes, measures of association and contingency. <b>23L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Graphical representation of data</li> <li>2. Problems based on measures of central tendency</li> <li>3. Problems based on measures of dispersion</li> <li>4. Problems based on combined mean and variance and coefficient of variation</li> <li>5. Problems based on moments, skewness and kurtosis</li> <li>6. Fitting of polynomials, exponential curves</li> <li>7. Karl Pearson correlation coefficient</li> <li>8. Partial and multiple correlations</li> <li>9. Spearman rank correlation with and without ties.</li> <li>10. Correlation coefficient for a bivariate frequency distribution</li> <li>11. Lines of regression, angle between lines and estimated values of variables.</li> <li>12. Checking consistency of data and finding association among attributes.</li> </ol>

--	--

Semester	
Paper Number	<b>STAT02GE01</b>
Paper Title	<b>Introductory Probability</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>UNIT I</b> Probability: Introduction, random experiments, sample space, events and algebra of events. Definitions of Probability – classical, statistical, and axiomatic. Conditional Probability, laws of addition and multiplication, independent events, theorem of total probability, Bayes' theorem and its applications. <b>38L</b></p> <p><b>UNIT II</b> Random Variables: Discrete and continuous random variables, p.m.f., p.d.f. ,c.d.f. Illustrations of random variables and its properties. Expectation, variance, moments and moment generating function. <b>30L</b></p> <p><b>UNIT III</b> Convergence in probability, almost sure convergence, Chebyshev's inequality, weak law of large numbers, De-Moivre Laplace and Lindeberg-Levy Central Limit Theorem (C.L.T.). <b>20L</b></p> <p><b>UNIT IV</b> Standard probability distributions: Binomial, Poisson, geometric, negative binomial, hypergeometric, uniform, normal, exponential, beta, gamma. <b>40L</b></p>

List of Practical	<ol style="list-style-type: none"> <li>1. Fitting of binomial distributions for <math>n</math> and <math>p = q = \frac{1}{2}</math> given</li> <li>2. Fitting of binomial distributions for <math>n</math> and <math>p</math> given</li> <li>3. Fitting of binomial distributions computing mean and variance</li> <li>4. Fitting of Poisson distributions for given value of <math>\lambda</math></li> <li>5. Fitting of Poisson distributions after computing mean</li> <li>6. Application problems based on binomial distribution</li> <li>7. Application problems based on Poisson distribution</li> <li>8. Problems based on area property of normal distribution</li> <li>9. To find the ordinate for a given area for normal distribution</li> <li>10. Application based problems using normal distribution</li> <li>11. Fitting of normal distribution when parameters are given</li> <li>12. Fitting of normal distribution when parameters are not given</li> </ol>
Reading/ Reference list	<ol style="list-style-type: none"> <li>1. Goon A.M., Gupta M.K. and Dasgupta B. (2002): An Outline of Statistical Theory, Vol. I, The World Press, Kolkata.</li> <li>2. Das, N.G.: Statistical Methods, Vol I and II, Tata McGraw Hill Pub. Co. Ltd.</li> <li>3. Hogg, R.V., Tanis, E.A. and Rao J.M. (2009): Probability and Statistical Inference, Seventh Ed, Pearson Education, New Delhi.</li> <li>4. Miller, Irwin and Miller, Marylees (2006): John E. Freund's Mathematical Statistics with Applications, (7th Edn.), Pearson Education, Asia.</li> <li>5. Myer, P.L. (1970): Introductory Probability and Statistical Applications, Oxford &amp; IBH Publishing, New Delhi</li> </ol>

Semester	
Paper Number	<b>STAT03GE01</b>
Paper Title	<b>Basics of Statistical Inference</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>UNIT I</b> Estimation of population mean, confidence intervals for the parameters of a normal distribution (one sample and two sample problems). The basic idea of significance test. Null and alternative hypothesis. Type I &amp; Type II errors, level of significance, concept of p-value. Tests of hypotheses for the parameters of a normal distribution (one sample and two sample problems). <b>40L</b></p> <p><b>UNIT II</b> Categorical data: Tests of proportions, tests of association and goodness-of-fit using Chisquare test, Yates' correction. <b>25L</b></p> <p><b>UNIT III</b> Tests for the significance of correlation coefficient. Sign test for median, Sign test</p>

	for symmetry, Wilcoxon two-sample test. <b>20L</b>
	<p><b>UNIT IV</b> Analysis of variance, one-way and two-way classification. Brief exposure of three basic principles of design of experiments, treatment, plot and block. Analysis of completely randomized design, randomized complete block design. <b>43L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Estimators of population mean.</li> <li>2. Confidence interval for the parameters of a normal distribution (one sample and two sample problems).</li> <li>3. Tests of hypotheses for the parameters of a normal distribution (one sample and two sample problems).</li> <li>6. Chi-square test of proportions.</li> <li>7. Chi-square tests of association.</li> <li>8. Chi-square test of goodness-of-fit.</li> <li>9. Test for correlation coefficient.</li> <li>10. Sign test for median.</li> <li>11. Sign test for symmetry.</li> <li>12. Wilcoxon two-sample test.</li> <li>13. Analysis of Variance of a one way classified data</li> <li>14. Analysis of Variance of a two way classified data.</li> <li>15. Analysis of a CRD.</li> <li>16. Analysis of an RBD.</li> </ol>
Reading/ Reference list	<ol style="list-style-type: none"> <li>1. Goon A.M., Gupta M.K. and Dasgupta B. (2002): Fundamentals of Statistics, Vol. I &amp; II, 8th Edn. Semester	
Paper Number	<b>STAT04GE01</b>
Paper Title	<b>Applied Statistics</b>
No. of Credits	<b>6</b>
No. of classes	Theory: 4 Practical: 4
Syllabus	<p><b>UNIT I</b> Economic Time Series: Components of time series, Decomposition of time series- Additive and multiplicative model with their merits and demerits, Illustrations of time series. Measurement of trend by method of free-hand curve, method of semi-averages and method of least squares (linear, quadratic and modified exponential). Measurement of seasonal variations by method of ratio to trend. <b>30L</b></p> <p><b>UNIT II</b> Index numbers: Definition, Criteria for a good index number, different types of index numbers. Construction of index numbers of prices and quantities, consumer price index number. Uses and limitations of index numbers. <b>26L</b></p> <p><b>UNIT III</b> Statistical Quality Control: Importance of statistical methods in industrial research and practice. Determination of tolerance limits. Causes of variations in quality: chance and assignable. General theory of control charts, process &amp; product control, Control charts for variables: X- bar and R-charts. Control charts for attributes: p and c-charts <b>36L</b></p> <p><b>UNIT IV</b> Demographic Methods: Introduction, measurement of population, rates and ratios of vital events. Measurement of mortality: CDR, SDR (w.r.t. Age and sex), IMR, Standardized death rates. Life (mortality) tables: definition of its main functions and uses. Measurement of fertility and reproduction: CBR, GFR, and TFR. Measurement of population growth: GRR, NRR. <b>36L</b></p>
List of Practical	<ol style="list-style-type: none"> <li>1. Measurement of trend: Fitting of linear, quadratic trend, exponential curve and plotting of trend values and comparing with given data graphically.</li> <li>2. Measurement of seasonal indices by Ratio-to-trend method and plotting of trend values and comparing with given data graphically.</li> <li>3. Construction of price and quantity index numbers by Laspeyres' formula, Paasche's formula, Marshall-Edgeworth's formula, Fisher's Formula - Comparison and interpretation.</li> <li>4. Construction of wholesale price index number, fixed base index number and consumer price index number with interpretation</li> <li>5. Construction and interpretation of X bar &amp; R-chart</li> <li>6. Construction and interpretation p-chart (fixed sample size) and c-chart</li> <li>7. Computation of measures of mortality</li> <li>8. Completion of life table</li> <li>9. Computation of measures of fertility and population growth</li> </ol>
