

**My Belief: Nothing Separates Exciting Classroom  
Instructions from the Joys of Doing Research**

*A direct link between teaching and research excites me.. A collection of my recent research activities in and around statistical inference and applied probability has originated from teaching. In this presentation, I will highlight some of those encounters. As time permits, I may discuss selected topics involving covariance, correlation, independence, Student's  $t$ -distribution, multivariate (non-)normality, sufficiency, information, and ancillarity with varying degrees of depth or coverage..*

**Department of Statistics  
Presidency University, Kolkata**

**Presents**

**A One-Day meeting with**

**Prof. Nitis Mukhopadhyay**

**Department of Statistics**

**University of Connecticut-Storrs**

**On**

**December 20, 2018 at 2p.m.**

**Venue: Seminar Room,**

**Department of Statistics**

**All are cordially Invited**
